

12. [project_structure.md](#)

Purpose: Dev-friendly repo map and architecture orientation

Elevation Foundation Project Structure

This repository includes all code and documents for the Elevation DAO stack.

Root Directory

Folder	Description
----- -----	

`/contracts`	Solidity smart contracts
`/oracle-backend`	Node/AI scripts for post evaluation + tipping
`/frontend`	React components for DApp + Utiligram
`/abis`	Compiled ABIs for JS integrations
`/test`	Hardhat-based unit tests
`/docs`	Whitepapers, guides, strategy files
`/scripts`	Deployment scripts and utilities

Smart Contract Directory

- `ElevationStableToken.sol`: 1:1 DAO-issued stablecoin
- `ElevationOwnershipToken.sol`: Equity + dividend token
- `ElevationUtilityToken.sol`: Reward + governance token
- `UtiligramFeed.sol`: Post/tip registry
- `ProfileRegistry.sol`: Track Elev8/Gener8 scores
- `ElevationYieldEngine.sol`: Cross-chain staking + yield

Backend (Oracle)

- `utiligramOracle.js`: Tip trigger + post validator
- Scheduled every few minutes or run manually
- Integrates with Chainlink/Gelato/AI system

Frontend

- `UtiligramDashboard.jsx`: Social + governance home page
- `UtiligramFeedView.jsx`: View/post social utility actions

Scripts

- `deploy.js`: Deploy contracts + register roles
- `.env.template`: Setup for RPC, keys, contract addresses

You're now ready to build locally, contribute, or deploy your own version.
