

Purus Project

Humanitarian

Hello everyone :) We are raising resources in an effort to continue developing a platform to facilitate, fund and innovate eco-friendly solutions to the world's plastic pollution problem, specifically of the particulate persuasion in the Pacific Ocean, also known colloquially as "Trash Island" by using genetically engineered enzymes, collected by using the magnetic properties of organic polymers, breaking down particulate plastic within hours and then use the non toxic by products produced from the breakdown to feed further enzyme production...

The decentralized platform will also act as a crowdfunding and collaboration portal to eventually perpetuate the integrity of all scientific research using tokenization, crypto reward mechanisms and distributed ledger technology

We are raising funds to further develop a decentralized platform for crowdfunding, collaborating, and perpetuating oceanic scientific research that uses tokenization and distributed ledger technology to ensure all scientific data integrity...as well as facilitate, fund and innovate eco-friendly solutions to the world's plastic pollution problem, specifically of the particulate pollution in the Pacific Ocean, also known colloquially as "Trash Island" by using genetically engineered enzymes, collected by using the magnetic properties of organic polymers, breaking down particulate plastic within hours and then use the non-toxic by-products produced from the breakdown to feed further enzyme production...

We are raising funds to develop a citizen-regulated rostrum for crowdfunding scientific

research research that use blockchain technology to ensure data integrity...as well as facilitate, fund and innovate eco-friendly solutions to the worlds plastic pollution problem, specifically of the particulate persuasion in the Pacific Ocean, also known colloquially as “Trash Island” by using genetically engineered enzymes, collected by using the magnetic properties of organic polymers, breaking down particulate plastic within hours and then use the non toxic by products produced from the breakdown to feed further enzyme production...

Environmentalism - Purus Project

Freecade- organic polymers and Petase
Solar - Marine Science Data blockchain on the octopus interoperable network to mitigate marine data manipulation, which is often the result of trying to appease funders, many of which are the very corporations that are causing the pollution that's killing the ocean... the PurusVerse will not only be portal to tokenize marine data, but will aim to set a standard and portal to tokenize all scientific data and act as global scientific community collaboration portal and research database that will help to prevent

duplicate or crossover research, enable collaboration, and act as a decentralized portal and digital library for all scientific data, idea, projects, and research.... Driven by PoParticipation consensus incentive that monetarily rewards peer review and collaboration and innovation and content cataloging on the network via the Purus coin, which is as well as decentralize and disrupt the current scientific research funding model: one, by equally allocating a portion of funds to all projects of merit, two, allocate another portion of funds on a weighted scale based on peer and user interest in each project, and three use a PoParticipation reward mechanism participation and by allowing other which is controlled often by the very companies that are creating the pollution in our oceans, be a open rostrum for research sharing, as well as project collaboration and a fundraising and grant resource portal that PoS or PoParticipation - and an annual fundraising crypto currency mecanismo that is only that is deflationary by burning

I wonder if the by product from the enzyme can be used as fuel or food to grown another

enzyme and the AI would have to locate plastics
