Purpose: Intro to the project for devs, contributors, and funders.

Elevation Foundation

****Profit for the People****

A decentralized nonprofit and tokenized social ecosystem for rewarding verified community utility.

Overview

Elevation Foundation is a self-funded, DAO-governed platform that:

- Acquires and operates local businesses
- Provides equity-based housing through rent-to-ownership
- Uses blockchain + AI to transparently redistribute revenue
- Rewards positive behavior through a gamified social DApp called ****Utiligram****

Core Features

- ****3-token architecture****:
 - ``EST``: Stablecoin minted from verified revenue
 - ``EOT``: Ownership token with dividend yield
 - ``EUT``: Utility token for tipping, staking, and governance
- ****Utiligram****:
 - Social network for real-world good
 - AI-verifies acts of kindness and tips users with tokens
 - Posts ranked by “Proof of Utility”
- ****Reputation System****:
 - ****Elev8 Score**** (slow growth, lifelong merit)
 - ****Gener8 Score**** (quarterly refresh, short-term boost)

Modules

Contract	Description
<code>`ElevationStableToken`</code>	Stablecoin backed by real business income
<code>`ElevationOwnershipToken`</code>	DAO equity token with treasury dividends
<code>`ElevationUtilityToken`</code>	Tipping, Learn2Earn, voting, staking
<code>`UtiligramFeed`</code>	Public ledger of utility posts
<code>`ProfileRegistry`</code>	Stores and updates Elev8/Gener8 rankings

Live DApp Components

- ``UtiligramDashboard``: User profile, feed, AI assistant, DAO messenger
- ``FeedView``: Submit proof, browse posts, see tipping data
- ``Oracle Backend``: AI service for verifying proof + triggering tips

Run Locally

```
``bash
git clone https://github.com/your-org/elevation-foundation.git
cd elevation-foundation
npm install

# Setup .env for backend
cp .env.template .env

# Compile contracts
npx hardhat compile

# Launch frontend
cd frontend && npm install && npm run dev
```
