

14. deploy.js

Assumes all contracts are in /contracts and Hardhat is installed.

Javascript

```
// scripts/deploy.js
```

```
const hre = require("hardhat");
```

```
async function main() {  
  const [deployer] = await  
hre.ethers.getSigners();  
  console.log("Deploying contracts  
with:", deployer.address);
```

```
  
  const EST = await hre.ethers.deployCo  
ntract("ElevationStableToken");  
  const EOT = await hre.ethers.deployCo  
ntract("ElevationOwnershipToken");  
  const EUT = await hre.ethers.deployCo  
ntract("ElevationUtilityToken", [60 * 24 *  
60 * 60]); // 60-day lock  
  const Feed = await hre.ethers.deployC  
ontract("UtiligramFeed");  
  const Profile = await hre.ethers.deploy  
Contract("ProfileRegistry");
```

```
  
  await EST.waitForDeployment();  
  await EOT.waitForDeployment();  
  await EUT.waitForDeployment();  
  await Feed.waitForDeployment();  
  await Profile.waitForDeployment();
```

```
  
  console.log("EST:", EST.target);  
  console.log("EOT:", EOT.target);  
  console.log("EUT:", EUT.target);  
  console.log("Feed:", Feed.target);  
  console.log("ProfileRegistry:",  
Profile.target);
```

```
  
  // Optional: grant roles if needed  
}
```

```
  
main().catch((error) => {  
  console.error(error);  
  process.exitCode = 1;  
});
```
