

How to Start a Newsletter Guide I wrote

Anyway, I got it boiled down to about as clean as I can get it... below is where we need to start to scale the Vetta Robo-Advisor and the associated newsletters like Dividend Robot and Modern DeFi/Digital:

1). Email List Cleaning and Validation

We have the emails... first thing we need to do is scrub them - clearout.io is the way to go.

Here is a link that explains everything you ever need to know about email scrubbing - https://clearout.io/help/#email_deliverability_guarantee

Cost - \$58 for 10k verifications and then pay as we go.

Competitors:

Neverbounce.com

Zerobounce.com

Hunter.io

2). Content Creation

After we scrub the lists we need to send them content. The first email they get will be a double opt in to our newsletter send from an independent Email Service provider (listed in section 4 below).

Then we take those opt ins and upload them to our publishing platform (listed on section 3, each of which has a separate email sending system) and upsell them to paid products like Dividend Robot, Vetta Robo-Trader, ebooks, Whitelabeled courses, Whitelabel trading platforms and crypto exchanges, ect...

Before all of that we need fresh content regarding dividends, investing, business news... as well as marketing copy, ect... on a very regular basis, daily to be honest...

We could use freelancers from Upwork or content brokers like ConstentContent.com or we

could could write the content ourselves - but that will cost thousands a month and take tons of time away from the Solar, Elevation Foundation, and Nixie...

Enter Generative AI articles...

Using feedspot or any RSS feed, like from Dividends.com or Feedspot, we can generate unique content to send in emails and post online, as well as intext and banner ads to market our paid products (Auto-trade, Whitelabel trader, Crypto wallets, ect...)

At less than \$40 a month, this is a must - best one I see for Finance and Investing is called Kafkai - <https://kafkai.com/en/samples>

This AI that can also write grants for Elevation Foundation or pitch decks and proposals for Sunrise Solar Systems and NiXieVerse...

Another one to consider is <https://www.synthesia.io/>, which turns any copy into videos - which is way more effective medium for marketing...

We simply input article titles/descriptions, or link an RSS feed, and, boom, we get fresh, unique free newsletter content.

Kafkai - Cost - \$29 a month

Synthesia - Cost - \$30 a year

Competitors:

<https://www.jasper.ai/>

<https://www.peppertype.ai/>

<https://rytr.me/>

<https://www.articleforge.com/>

<https://glossai.co/>

<https://quillbot.com/>

3). Publishing Platforms

Web3

a). Paragraph.xyz or Mirror.xyz - both allow email subscriptions to  web3 wallet memberships... allowing readers to participate in profits through

NFTs, these platforms turn readers, into subscribers, into members. NFTs give your audience ownership in the DR community, allowing us to rewards referrals, ect... which will help supercharge growth & earning potential

Cost: Gas Fees on Solana which are minimal to none.

b). Web3 Affiliate program - <https://sharemint.xyz/> - offer incentives to get discovered by ShareMint partners and affiliates, creating viral loops by sharing your revenue with your supporters for successful referrals - <https://paragraph.xyz/@blog/referrals-chains-and-more>

Cost: Free for newsletter publishers

Web2

a). Ghost.org or Beehiiv.com - these are amazing and launched only in the last couple years... too bad they weren't around my last go at it, but they are now! They include:

Web Hosting (SEO Optimized)☒Custom Newsletters☒Best-in-class CMS☒Campaign & Subscriber Analytics☒Newsletter Recommendations☒Magic Links☒Audience Segmentation (Limit 3)☒Custom fields☒Popups & Advanced Email Capture☒External Subscribe Forms☒Granular Attribution Data☒Real-time Email Verification☒Optimized Inbox Deliverability☒Dynamic RSS Feed☒Unlimited Sending Custom Domains (Email + Web)☒Offer Premium Subscriptions☒Unlimited Audience Polls☒Audience Segmentation (Unlimited)☒Multiple Team Members☒Promotional Offers & Trials☒A/B Testing Subject Lines☒API Access☒Custom HTML☒Subscriber Forms Integrated Referral Program☒Automated Journeys☒3D Analytics☒Dedicated Email Blasts☒Multiple Publications☒Full A/B Test Customization☒Webpages & Navigation☒Priority Support

Cost: \$89 a month

b). Web2 Affiliate Network - [Viral-Loops.com](https://viral-loops.com) or

ShareaSale.com - same concept as the Web3 without NFTs...

Good info regarding both:

<https://viral-loops.com/blog/ghost-newsletter-referral-integration/>

<https://ghost.org/resources/newsletter-referral-programs/>

Cost - \$35 a month

4). Email Service Providers

We are going to need to use one of the services below to send out a double optin to our emails list after we scrub them with Clearout.io before we upload them to BeeHiiiv.com and Paragraph.xyz

This is a crucial part of the step. Here are three services that are good and reputable and cycle IPs, ect.

Mailerlite - \$47 a month for 10k contacts, unlimited sends...

<https://www.mailerlite.com/pricing>

Sendx - \$59 a month 15k contacts, unlimited sends...

<https://www.sendx.io/pricing>

Omnisend - \$59 a month for 30k sends

<https://www.omnisend.com/blog/email-deliverability/>

5). Auto-Trade Platforms and App Whitelabel for Vetta and DR.

We are also going to need to direct folks to an robo-trader/advisor platform that links to your IB account, but has a cleaner face and onboarding portal...

Here is what I found on that:

a). Tradingfront.com or Entasoft.com - both are Whitelabel Robo-Advisor and Mobile app trader that plug into IB so we can soft sell the auto-Traded DR portfolio through the email newsletter... it also allows us to white label their trading platform and their mobile app and educational content - these are a great platforms ... this would be for people who want the DR auto-traded for them by you...

“We do it all for you so you can get up and running with a complete tech stack built on top of the industry's most sophisticated trading custodian, Interactive Brokers. Our elegant, white-label onboarding module allows your clients to submit brokerage account applications in minutes” - TradingFront.

Cost: \$100 per month, covers the first 100 accounts or the first \$10M AUM

<https://www.tradingfront.com/pricing>

b). Trendspider.com or TradingView.com - Allows you to connect to IB and publish autotraded portfolios and charge subscription for an “invite-only script” - it doesn’t have the onboarding process like the services listed in (a) - it just allows people to copy our trades - and it’s doesn’t have the whitelabeling, ect... basically this is for people who want to do DR themselves...the premium version allows you to have a profile and to promote your autotraded portfolio and provide exact details on how to obtain access to it, including off-site charging arrangements... <https://www.tradingview.com/gopro/?source=footer&feature=pricing#compare>

Cost: \$33 a month

6). Payment Processing

Most of the publishing platforms have APIs we can link our own payment processor service to. We want to use one that accepts both Fiat and Crypto. Plasma pay was a big player, but they are

restructuring... the new kid on the block is
PayPax.io

By using a PayPax account, we can easily connect any online store to a E-money and crypto payment gateway and sell products and services globally by accepting both fiat and cryptocurrency payments at the same time, mitigating chargeback fraud, ect... A multi-currency PayPax account enables you to send or receive money from others fast and with low fees.

Two other Crypto to Fiat payment processors are Hambit.io and Nowpayments.io - they are working on Fiat up front as well, but aren't there quite yet...

Cost: Free to set up. Just need to connect the API.

Some other up and comers:

<https://uphold.com/get-started/business>

<https://interledger.org/developer-tools/get->

started/overview/

<https://amaryllispay.com/>

7). Logos and Names

I also redid the DR logo some what. I've attached what I've come up with - just some tweaks on what you had already.

Also, I think we should use the name DR for targeting the baby boomers (web2) and use another name for targeting the millennials (web3). I was thinking "Modern Dividend" (MD)- I attached a logo I did up that I think looks pretty good. Let me know your thoughts on it. Or we can use it for a completely separate newsletter about blockchain and DeFi - call it "Modern DeFi" or "Modern Digital" - the MD is a good logo...I would hate to see it go to waste...

Anyway, so that's what's I got on the newsletter front. We can get it all up and going for certainly less than a grand...

I'm down to hit it full time. I'm really surprised at the opportunity here... with my contact lists and all of the tech coming about just this last year... not to mention the costs being so reasonable... we really might have a winner...

There is a ton more to show you too...

If you're game, I'm down to hit it full throttle... Let me know what you think.

All I really need is need is a proper phone for app article formatting/design and such . My computer is good to go. And I have the Explorer. I do have to be in Texas March 2nd for another court date. I figure I would drive there, then on to Florida... This place is too expensive.

Hope you're well.

I appreciate everything, Dad.

Truly,

Neil

Emailoctopus -

<https://logix.in/service/bulk-email/>

Good to have as a back up plan.

3). For DR we should launch on

Substack

Seeking alpha

Email sending - Emailer

We need a investment app

We need an affiliate network like ShareaSale

We need a website first.

I had moderndigital.media through

<https://www.marketermilk.com/blog/best-newsletter-platforms>

Generative AI

UA marketing management for all -

Influencer ads for Kard and other white label

In game ads and marketing on web3

Ads on Social media driving to sales funnel for Kard

Vetta Marketing lists - Buy IC media and dedicatedemailS

Also webscrap

Trade-ideas - Allows you to connect to IB and publish autotraded portfolios and charge subscription and get money for referring their service

Education

<https://www.trade-ideas.com/>

<https://www.trade-ideas.com/education/trading-books-and-documents/>

<https://www.trade-ideas.com/education/trading-books-and-documents/>

TradingView

The sole exception to this is when the author intends to sell an invite-only script, in which case he/she is allowed to promote it and provide exact details on how to obtain access to it, including off-site charging arrangements.

<https://quillbot.com/>
