

Investment Newsletter Model -

Dividend Robot or Modern Dividend - Residual Income

New esp and payment processor - trade portfolio - an off shoot newsletter

He is picked about who he promoted to his subscribers - so it would have to be deals - like Solar - credit default swaps on commercial real estate - and with charity that reward with stablecoins

MTX - cross chain consensus mechanism solver -

Staking stablecoins and getting insurance on the drop - or DividendCoin - on the blockchain - they earn stable coins from a part of their subscription and that is then stalked or used to earn cross chain consensus rewards on the app... or website -

How to launch stable coin with business incomes and reward customers

STO and CRO - Tokenized utilities

Fractional ownership of tokenized bonds

Web3 QR code products that let you participate in profits

Social media - DayTradingIsDead,
DividendsKeepYouFed -

Solar residual

Alt energy residual

Alternatively income

Commercial and personal loan portfolios

How to make residual income money on insurance

Hey Ben,

If it isn't too much trouble, could we push the meeting to later in the day? My wife isn't feeling well and I have to take care of a few things for her this morning...

But in the meantime here is a basic outline of

what I was going to bring to the table during our conversation:

Making a website like [suredividend.com](https://www.suredividend.com) more profitable and integrating it with Web 3.0 can involve several strategies. Here are some detailed suggestions:

Basically, we are a boutique Fintech company, that focused mainly on building smart contract auto trading systems for individuals and institutions, and feel like it's time to branch out and partner with an income/dividend focused newsletter that can provide our extensive individual investor (150k) network and our institutional/family office network of well over 1000 with a wider range of research....

We have a few analysts, one income and one energy, so join forces with a more experienced newsletter based business like [suredividend](https://www.suredividend.com), especially since we also are looking to launch an alternative energy newsletter, would be beneficial for us of course, but for you we can bring a lot to the table:

Whether be it simple web2 marketing avenues through our network to simply increase your subscriber base, to pioneering a Web3 model, based off a an IoT blockchain app, where you can start your own stable coin (dollar in to mint out), that you can use to not only reward subscribers for influencer marketing, but create a network of cross chain blockchain master nodes, that not only earn the subscribers rewards while using the app, but also provides you with a compounding revenue stream to expand your business...

that provides rewards and rebated to subscribers through your own digital wallet that earns rewards each time it's downloaded, not only for you but also for the subscriber minting stables

and our extensive publishing partner network and your team of analyst

1. ****Increase Subscription Services:**** The website already offers premium content to subscribers. Improve these services by providing more exclusive and high-value content. You can also introduce tiered subscription plans to cater to different customer needs. For example, a beginner investor might need a different set of tools and resources compared to an experienced investor.

2. ****Advertising:**** Consider partnering with relevant businesses for advertisement placements. This could include companies in the finance industry, trading platforms, or education platforms that offer courses on investing. Ensure the ads are non-intrusive to provide a positive user experience.

3. ****Affiliate Marketing:**** Collaborate with finance-related products or services for affiliate marketing. For every customer directed from suredividend.com that makes a purchase, the website earns a commission.

4. ****Sponsorships and Partnerships:**** Partner

with finance companies, investment firms, or stock market platforms to sponsor content. This can increase revenue and also enhance the website's credibility.

5. ****Webinars and Online Courses:**** Create and sell online courses or webinars on investment strategies, understanding dividends, and other relevant topics.

As for integrating with Web 3.0, here are some strategies:

1. ****Blockchain Integration:**** Utilize blockchain technology for subscriptions and payments. Cryptocurrencies could be used to pay for subscriptions, making transactions more secure and attracting a new audience interested in crypto.

2. ****Decentralized Finance (DeFi) Tools:**** Implement DeFi tools to offer financial services such as investment pooling, staking, or yield farming. This would attract advanced investors interested in the potential of DeFi.

3. ****NFTs:**** Introduce NFTs (Non-Fungible Tokens) for exclusive content or courses. This can create a sense of exclusivity and value for your premium content.
4. ****Smart Contracts:**** Use smart contracts to automate processes like subscription renewals and cancellations, ensuring a smoother, user-friendly experience.
5. ****Decentralized Identity:**** Utilize decentralized identity solutions to enhance user privacy and security. This gives users control over their data and can build trust with your platform.

Remember that any changes should always prioritize user experience, as maintaining a user-friendly and intuitive interface is key for repeat traffic and customer satisfaction.

Here are some software and app examples that could be used to achieve the strategies mentioned:

1. ****Increase Subscription Services:**** Use platforms like Patreon, Substack, or Memberful to manage subscriptions and provide exclusive content to subscribers.
2. ****Advertising:**** Platforms like Google AdSense and Taboola can help you manage and place relevant ads on your website.
3. ****Affiliate Marketing:**** Amazon Affiliate Program, CJ Affiliate, or ShareASale can provide a wide range of finance-related products or services for affiliate marketing.
4. ****Sponsorships and Partnerships:**** This is more about networking and building relationships, but platforms like LinkedIn could help connect with potential partners.
5. ****Webinars and Online Courses:**** Use platforms like Teachable, Udemy, or Kajabi to create and sell online courses or webinars.

For Web 3.0 integration:

1. **Blockchain Integration:** Coinbase Commerce or BitPay can allow you to accept cryptocurrencies as a form of payment.
2. **Decentralized Finance (DeFi) Tools:** Smart contract platforms like Ethereum or Binance Smart Chain can be used to create and implement DeFi tools.
3. **NFTs:** Mintable or OpenSea can be used to create and sell NFTs for your exclusive content.
4. **Smart Contracts:** Ethereum and Solidity can be used to create and implement smart contracts for processes like subscriptions.
5. **Decentralized Identity:** Solutions like 3Box or uPort can be used to provide decentralized identity solutions for your users.

Additionally, you might need to work with web development teams or freelancers who are familiar with these technologies and platforms, especially for the Web 3.0 integrations, as those

would require more technical expertise.

Web3 Wall Street Bets - we all Pool to massive short and then buy back - or we sell credit default swap on

AI that rewards companies that do utilitarianism

Also special reports

Run our dividend hedge model for people to pay to follow

Sell course

Rip Aryeh

Hey Dad,

Sorry it took me a minute to send this over - once I started going over everything again, I got lost in the research hole.

Also, thanks again for that hundred. I really appreciate it. My other phone screen got fucked over the weekend, so we have to talk on this phones signal - the Cornwallus number while I get it fixed...

Anyway, I got it boiled down to about as clean as I can get it... below is where we need to start to scale the Vetta Robo-Advisor and the associated newsletters like Dividend Robot and Modern DeFi/Digital:

1). Email List Cleaning and Validation

We have the emails... first thing we need to do is scrub them - clearout.io is the way to go.

Here is a link that explains everything you ever need to know about email scrubbing - https://clearout.io/help/#email_deliverability_guarantee

Cost - \$58 for 10k verifications and then pay as we go.

Competitors:

Neverbounce.com

Zerobounce.com

Hunter.io

Finder.io

2). Content Creation

After we scrub the lists we need to send them content. The first email they get will be a double opt in to our newsletter send from an independent Email Service provider (listed in section 4 below).

Then we take those opt ins and upload them to our publishing platform (listed on section 3, each of which has a separate email sending system) and upsell them to paid products like Dividend Robot, Vetta Robo-Trader, ebooks, Whitelabeled courses, Whitelabel trading platforms and crypto exchanges, ect...

Before all of that we need fresh content regarding dividends, investing, business news... as well as marketing copy, ect... on a very

regular basis, daily to be honest...

We could use freelancers from Upwork or content brokers like ConstentContent.com or we could could write the content ourselves - but that will cost thousands a month and take tons of time away from the Solar, Elevation Foundation, and Nixie...

Enter Generative AI articles...

Using feedspot or any RSS feed, like from Dividends.com or Feedspot, we can generate unique content to send in emails and post online, as well as intext and banner ads to market our paid products (Auto-trade, Whitelabel trader, Crypto wallets, ect...)

At less than \$40 a month, this is a must - best one I see for Finance and Investing is called Kafkai - <https://kafkai.com/en/samples>

This AI that can also write grants for Elevation Foundation or pitch decks and proposals for Sunrise Solar Systems and NiXieVerse...

Another one to consider is <https://www.synthesia.io/>, which turns any copy into videos - which is way more effective medium for marketing...

We simply input article titles/descriptions, or link an RSS feed, and, boom, we get fresh, unique free newsletter content.

Kafkai - Cost - \$29 a month

Synthesia - Cost - \$30 a year

Competitors:

<https://www.jasper.ai/>

<https://www.peppertype.ai/>

<https://rytr.me/>

<https://www.articleforge.com/>

<https://glossai.co/>

<https://quillbot.com/>

3). Publishing Platforms

Web3

a). Paragraph.xyz or Mirror.xyz - both allow email subscriptions to  web3 wallet memberships... allowing readers to participate in profits through NFTs, these platforms turn readers, into subscribers, into members. NFTs give your audience ownership in the DR community, allowing us to rewards referrals, ect... which will help supercharge growth & earning potential

Cost: Gas Fees on Solana which are minimal to none.

b). Web3 Affiliate program - <https://sharemint.xyz/> - offer incentives to get discovered by ShareMint partners and affiliates, creating viral loops by sharing your revenue with your supporters for successful referrals - <https://paragraph.xyz/@blog/referrals-chains-and-more>

Cost: Free for newsletter publishers

Web2

a). Ghost.org or Beehiiv.com - these are amazing and launched only in the last couple years... too bad they weren't around my last go at it, but they are now! They include:

Web Hosting (SEO Optimized)☐Custom Newsletters☐Best-in-class CMS☐Campaign & Subscriber Analytics☐Newsletter Recommendations☐Magic Links☐Audience Segmentation (Limit 3)☐Custom fields☐Popups & Advanced Email Capture☐External Subscribe Forms☐Granular Attribution Data☐Real-time Email Verification☐Optimized Inbox Deliverability☐Dynamic RSS Feed☐Unlimited Sending Custom Domains (Email + Web)☐Offer Premium Subscriptions☐Unlimited Audience Polls☐Audience Segmentation (Unlimited)☐Multiple Team Members☐Promotional Offers & Trials☐A/B Testing Subject Lines☐API Access☐Custom HTML☐Subscriber Forms Integrated Referral Program☐Automated Journeys☐3D Analytics☐Dedicated Email Blasts☐Multiple Publications☐Full A/B Test Customization☐Webpages & Navigation☐Priority Support

Cost: \$89 a month

b). Web2 Affiliate Network - Viral-Loops.com or ShareaSale.com - same concept as the Web3 without NFTs...

Good info regarding both:

<https://viral-loops.com/blog/ghost-newsletter-referral-integration/>

<https://ghost.org/resources/newsletter-referral-programs/>

Cost - \$35 a month

4). Email Service Providers

We are going to need to use one of the services below to send out a double optin to our emails list after we scrub them with Clearout.io before we upload them to BeeHiiiv.com and Paragraph.xyz

This is a crucial part of the step. Here are three services that are good and reputable and cycle IPs, ect.

Mailerlite - \$47 a month for 10k contacts, unlimited sends...

<https://www.mailerlite.com/pricing>

Sendx - \$59 a month 15k contacts, unlimited sends...

<https://www.sendx.io/pricing>

Omnisend - \$59 a month for 30k sends

<https://www.omnisend.com/blog/email-deliverability/>

5). Auto-Trade Platforms and App Whitelabel for Vetta and DR.

We are also going to need to direct folks to an robo-trader/advisor platform that links to your IB account, but has a cleaner face and onboarding portal...

Here is what I found on that:

a). Tradingfront.com or Entasoft.com - both are Whitelabel Robo-Advisor and Mobile app trader that plug into IB so we can soft sell the auto-Traded DR portfolio through the email newsletter... it also allows us to white label their trading platform and their mobile app and educational content - these are a great platforms ... this would be for people who want the DR auto-traded for them by you...

“We do it all for you so you can get up and running with a complete tech stack built on top of the industry's most sophisticated trading custodian, Interactive Brokers. Our elegant, white-label onboarding module allows your clients to submit brokerage account applications in minutes” - TradingFront.

Cost: \$100 per month, covers the first 100 accounts or the first \$10M AUM

<https://www.tradingfront.com/pricing>

b). Trendspider.com or TradingView.com - Allows you to connect to IB and publish autotraded portfolios and charge subscription for an “invite-only script” - it doesn’t have the onboarding process like the services listed in (a) - it just allows people to copy our trades - and it’s doesn’t have the whitelabeling, ect... basically this is for people who want to do DR themselves...the premium version allows you to have a profile and to promote your autotraded portfolio and provide exact details on how to obtain access to it, including off-site charging arrangements... <https://www.tradingview.com/gopro/?source=footer&feature=pricing#compare>

Cost: \$33 a month

6). Payment Processing

Most of the publishing platforms have APIs we can link our own payment processor service to. We want to use one that accepts both Fiat and Crypto. Plasma pay was a big player, but they are restructuring... the new kid on the block is PayPax.io

By using a PayPax account, we can easily connect any online store to a E-money and crypto payment gateway and sell products and services globally by accepting both fiat and cryptocurrency payments at the same time, mitigating chargeback fraud, ect... A multi-currency PayPax account enables you to send or receive money from others fast and with low fees.

Two other Crypto to Fiat payment processors are Hambit.io and Nowpayments.io - they are working on Fiat up front as well, but aren't there quite yet...

Cost: Free to set up. Just need to connect the API.

Some other up and comers:

<https://uphold.com/get-started/business>

<https://interledger.org/developer-tools/get-started/overview/>

<https://amaryllispay.com/>

7). Logos and Names

I also redid the DR logo some what. I've attached what I've come up with - just some tweaks on what you had already.

Also, I think we should use the name DR for targeting the baby boomers (web2) and use another name for targeting the millennials (web3). I was thinking "Modern Dividend" (MD)- I attached a logo I did up that I think looks pretty good. Let me know your thoughts on it. Or we can use it for a completely separate newsletter about blockchain and DeFi - call it "Modern DeFi" or "Modern Digital" - the MD is a good logo...

would hate to see it go to waste...

8). 5. E-learning Platform

We make investment education course, programs and webinars with AI and publish them on E-learning platforms enable creators to share their expertise with others hungry for knowledge. In addition, you can build and nurture a thriving online community. Examples of e-learning white-label SaaS platforms include Stream LXP, Thinkific, Teachable, and TalentLMS.

<https://lifterlms.com/blog/white-label-lms-elearning-platform/>

<https://lifterlms.com/blog/white-label-lms-elearning-platform/>

<https://kitaboo.com/5-white-label-training-platforms/>

<https://currency.com/tokenized-shares>

Anyway, so that's what's I got on the newsletter

front. We can get it all up and going for certainly less than a grand...

I'm down to hit it full time. I'm really surprised at the opportunity here... with my contact lists and all of the tech coming about just this last year... not to mention the costs being so reasonable... we really might have a winner...

There is a ton more to show you too...

If you're game, I'm down to hit it full throttle... Let me know what you think.

All I really need is need is a proper phone for app article formatting/design and such . My computer is good to go. And I have the Explorer. I do have to be in Texas March 2nd for another court date. I figure I would drive there, then on to Florida... This place is too expensive.

Hope you're well.

I appreciate everything, Dad.

Truly,

Neil

Emailoctopus -

<https://logix.in/service/bulk-email/>

Good to have as a back up plan.

3). For DR we should launch on

Substack

Seeking alpha

Email sending - Emailer

We need a investment app

We need an affiliate network like ShareaSale

We need a website first.

I had moderndigital.media through

<https://www.marketermilk.com/blog/best-newsletter-platforms>

Generative AI

UA marketing management for all -

Influencer ads for Kard and other white label

In game ads and marketing on web3

Ads on Social media driving to sales funnel for Kard

Vetta Marketing lists - Buy IC media and

dedicatedemailS

Also webscrap

Trade-ideas - Allows you to connect to IB and publish autotraded portfolios and charge subscription and get money for referring their service

Education

<https://www.trade-ideas.com/>

<https://www.trade-ideas.com/education/trading-books-and-documents/>

<https://www.trade-ideas.com/education/trading-books-and-documents/>

TradingView

The sole exception to this is when the author intends to sell an invite-only script, in which case he/she is allowed to promote it and provide exact details on how to obtain access to it,

including off-site charging arrangements.

<https://quillbot.com/>
